Vyopta Awarded State of Texas DIR contract

AUSTIN, Texas – August 30, 2010. Vyopta Incorporated, a premier software developer of video and unified collaboration applications, today announced that it has been awarded a contract for Data Communications Telecommunications Networking Equipment and Related Services by the Texas Department of Information Resources (DIR).

Vyopta's DIR contract includes proprietary software applications developed as an application layer for currently existing video communications platforms. Vyopta's products help drive adoption of video communications technologies while integrating them with business workflows and processes.

"Under this contract, Texas state and local agencies, education and even other states can purchase Vyopta's products and services without the need for a competitive bid process," says Alfredo Ramirez, president of Vyopta. "Vyopta's products and services help these agencies along with other organizations to meet new initiatives with video communications, such as more environmentally sound business practices, all while contributing to the bottom line."

The Texas DIR provides statewide leadership and oversight for management of government information and communications technology. The Texas DIR saves its customers money by effectively delivering the best price without the need for a bid process.

About Vyopta Incorporated
