

Software Application for Users

Web Portal for Administrators

vControl®

Cloud Edition

Vyopta's vControl — Available as a cloud service.

All the usability of the original vControl with improved management and administration services.

User Features:

- User authentication (also determines access privileges)
- Intuitive and configurable graphical interface
- Simple call initiation — including URI and audio call features (with SIP audio integration)
- Click-to-call from synchronized address books and calls history
- Simplified bridge control for conference access and local layout controls
- Presentation of real-time call statistics
- Simple touch camera controls and one touch camera preset selections
- Dynamic video compositing (near and far end) for certain Cisco TelePresence video endpoints
- Ability to save and load customized compositing layouts (near and far end)
- Simple input source selection from all active video inputs
- Expanded accessibility to video input connectors through software switching

Management Features:

- *From the Client Application*
 - Remote call control by administrators for concierge service/support
 - Snapshots of local and other active video sources
 - Ability to control delivery of content or video by media channel
 - Remote administration of video composite layout templates (near and far end)
- *From the web-based administrator tools*
 - Centralized registration of all video endpoints
 - Management of client installs and user accounts
 - Create customized assignable configurations for user groups
 - Seamless enterprise-wide deployment and updates

Advanced Integration:

- Optional recording controls (for applications such as lecture or meeting capture)
- Integration with vAdapt for advanced recording functions and content tagging and delivery
- Optional integration with vAdapt to provide video concierge service capability

Additional Info:

- Supports Microsoft Windows XP, Vista and 7 (desktop, laptop, tablet PC and netbook) and Apple iOS (iPad, iPod touch and iPhone)
- Supports Microsoft Internet Explorer, Mozilla Firefox and Apple Safari
- Client software communicates with endpoints over IP wired or wireless network
