One tool to monitor and analyze Cisco WebEx. Easily grow adoption and optimize cost.

Simplify

Escape complexity and spreadsheet manipulation with one, powerful monitoring tool. Start getting more from your single or multi-vendor video investment with less effort.

Grow

Identify active and inactive users by location, department, and more. Drill into meeting statistics and usage information to make better decisions about which WebEx features to purchase and deploy.

Optimize

Understand utilization trends across all users and to better allocate licensing. Track audio usage and incentivize lower cost options like VoIP. Finally, you'll be able to forecast and purchase effectively.

One tool for your entire environment

vAnalytics simplifies all of your video collaboration data into one, powerful dashboard. Your data will become more accurate and comprehensive while becoming easier view and put to good use. You'll be solving issues in seconds and generating custom reports that are easy to understand and share with other stakeholders in your company.

Grow adoption to maximize productivity

vAnalytics' pulls in data for every meeting, host and participant. By using custom filters and automated reports you can continuously evaluate and promote usage by leveraging powerful insights about what motivates or discourages your users. This means you can finally understand how to distribute your video resources thanks to data that is easy to find and easy to use.

Optimize assets and scale your investment efficiently.

vAnalytics will empower you to identify critical trends around employee adoption, demand for technology, and capacity utilization. You'll get the most from your current assets, and ensure you never overspend or run out of resources.
